

# Look at what we have! Our visit to La Trobe Wildlife Sanctuary

As part of our inquiry unit we visited La Trobe Wildlife sanctuary to get our “Hands on Habitats”. We investigated three habitats in an Australian River Red Gum Woodland – **The Terrestrial (Ground), The Arboreal (Tree tops and hollows) and The Wetland (Aquatic habitats)**. We discovered how these environments function and what is required to create our own habitats! For example, as humans we need water, food, company (family and friends), and shelter to survive.
